

AFFORDABLE ALUMINUM

High-Quality Aluminum Extrusions at Competitive Prices

WHY AFFORDABLE ALUMINUM?

Safespill developed ILDFA, a fire protection system for aircraft hangars that uses custom aluminum components. To support long-term production and reduce supply chain risk, Safespill invested in its own aluminum extrusion line, manufactured by Kautec and installed in 2025. While this line secures critical capacity for core manufacturing, it also creates a unique opportunity: the system's aluminum needs occupy only a portion of the line's full capacity, leaving significant excess available.

Affordable Aluminum was created to utilize that capacity, offering aluminum extrusions at below market pricing. Because extrusion is not our core business, we provide the same standards at a lower cost.

High-quality. Low overhead. Built to perform.
